 portfolio

Summary

Motivated undergraduate student with a strong interest in data analysis and Python programming. Skilled in data visualization, problem-solving, and working with analytical tools to extract meaningful insights. Eager to apply technical knowledge and continuously develop professional skills in a dynamic work environment.

Education

2023 – 2027 **Bachelor of (Hons) Information and Communication Technology**, *University of Vavuniya*
Vavuniya, Sri Lanka

2019 – 2021 **Advance Level**, *Mihindu Central College*
Agalawatta, Sri Lanka

Certificates

- Python For Beginners [↗](#)
- Intro to Programming/Kaggle [↗](#)
- Excel for Data Analysis/Coursera [↗](#)
- Python Programming [↗](#)
- Introduction to Data Analytics/Coursera [↗](#)
- Python for Beginners/Simplilearn [↗](#)
- Data Science Essentials with Python/Cisco Networking Academy [↗](#)

Skills

Data Analysis

Python

Data Visualization

Power BI

Databases

MySQL | MongoDB

Frontend Development

React.js | JavaScript

Backend Developer

Node.js | Python

Soft Skills

- Problem Solving
- Time Management
- Teamwork and Collaboration
- Communication
- Attention to detail
- Decision-Making

Languages

- English
- Sinhala

Projects

Python_Calculator

A simple command-line calculator written in Python. It can perform basic arithmetic operations such as addition, subtraction, multiplication, division, power, and remainder.

Python-Simple-Weather-App

A simple Python desktop weather application built using Tkinter that displays real-time weather data fetched from the OpenWeatherMap API. Just type a city name and hit Enter to view the current weather conditions including temperature, humidity, wind speed, and more.

todoList_python

Developed a desktop-based To-Do List application using Python, Tkinter, and ttk. Features include task creation, deletion, and management through a modern user interface, with JSON-based data storage for persistent task saving and loading. This project enhanced my skills in GUI development, event-driven programming, and file handling in Python.

Phone-location-track

A Python project that detects a phone number's country, location, and coordinates, then displays it on an interactive map. Built using phonenumbers, geocoder, and folium, it's a simple yet powerful tool for learning geolocation, data visualization, and Python integration.

my-portfolio

Designed and developed a professional portfolio website to showcase my skills, projects, and achievements in Data Analysis and Python development. The portfolio highlights my technical expertise, project experience, and career objectives through a modern, responsive, and user-friendly interface.

crypto-dashboard

Developed a full-stack web application using React.js and FastAPI to provide real-time cryptocurrency market tracking and analysis. The platform displays live prices, 24-hour changes, and interactive charts, with features like favorite coins, price alerts, and user authentication. Designed with a responsive and user-friendly interface, CryptoPulse helps users easily monitor and analyze crypto market trends.
